- * Understanding behind the scene of hashmap.
- * Closest Duplicates
- * Longest chain of consecutive Elements
- * Longest subarray with $\text{sum} = 0$.

HashMap. \rightarrow data structure.

Key, value.

search $\rightarrow O(1)$
add $\rightarrow O(1)$
remove $\rightarrow O(1)$
size $\rightarrow O(1)$
update $\rightarrow O(1)$

} $O(1)$
Avg.

Array. arr[N]

indices. $\rightarrow [0 \text{ to } N-1] \Rightarrow$ act as Keys.

<u>Key</u>	<u>value</u>
5	20
16	25

arr[5] = 20

arr[16] = 25.

$1 \leq \text{Key} \leq 10^9$

arr[10^9] = — x

M.L.E. Error

$1 \leq \text{total number of keys} \leq 10^5$

$\equiv \} \% m \Rightarrow 0 \text{ to } m-1.$

Assumption. \rightarrow let's say we can have maximum size of array = 17
indices

Keys $\rightarrow \{10, 20, 30, 27\}$

[0, 16]

Hashing function \rightarrow Key % 17

Collision

$10 \% 17 \rightarrow 10$

$20 \% 17 \rightarrow 3$

$30 \% 17 \rightarrow 13$

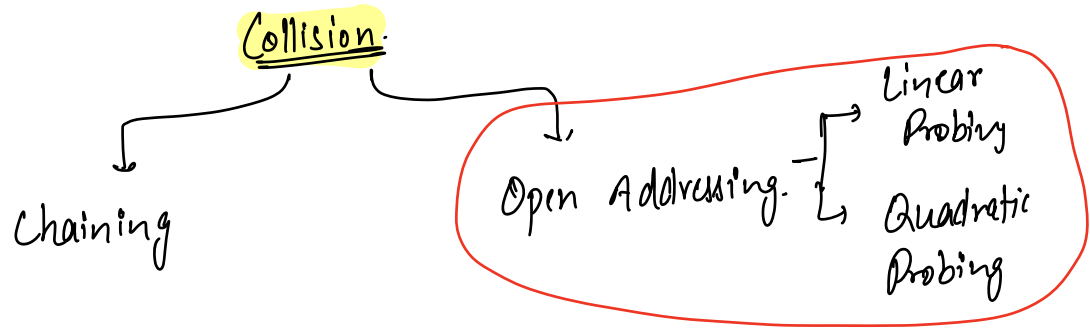

$27 \% 17 \rightarrow 10$

arr[10] $\rightarrow v_1$

arr[3] $\rightarrow v_2$

arr[13] $\rightarrow v_3$

arr[10] $\rightarrow v_4$

elements - [2 4 5 7 10 2 5 20 5 1]

[store freq of
all the elements]

Size allowed $\rightarrow 5$ element % 5

int arr = new int [N];

LinkedList < Node > [] hashmap = new LinkedList [N];

Node		Node

		Node next	

Closest Duplicates

Q Given an integer array of size N . Find $\text{pair}(i, j)$ such that $j > i$ and $A[i] == A[j]$ and $j - i$ is minimum.

idea-1 Consider all the pairs T.C $\rightarrow O(N^2)$

$\swarrow \searrow$
 $N \log N$ N
 $\rightarrow \text{Sorting } \times$
 $\rightarrow \text{BS } \times$

$X \leftarrow 7 \rightarrow X \leftarrow 5 \rightarrow X \leftarrow 10 \rightarrow X \leftarrow 3 \rightarrow X$

observation \rightarrow for every element, keep a track of last occurrence of that element.
 element \rightarrow last occurrence.

$\text{arr} \rightarrow [1, 2, 3, 6, 1, 2, 3, 2, 1]$

element \rightarrow last occ.

1	\rightarrow	0 4
2	\rightarrow	1 5 7
3	\rightarrow	2 6
6	\rightarrow	3

$\text{ans} = \text{INT-MAX}$

$\text{ans} = \min(\text{INT-MAX}, 4-0) = 4$

$\text{ans} = \min(4, 5-1) = 4$

$\text{ans} = \min(4, 6-2) = 4$

$\text{ans} = \min(4, 7-5) = 2$

$\text{ans} = \min(2, 8-4)$

curr idx \uparrow last occurrence

pseudo-code

of current element

```
hm < int, int > ; ans = INT_MAX
for( int i = 0 ; i < n ; i++ ) {
    if ( arr[i] is not present in hm ) {
        hm.insert( arr[i], i );
    }
    else {
        lo = hm[ arr[i] ];
        ans = min( ans, i - lo );
        hm.update( arr[i], i );
    }
}
return ans;
```

T.C $\rightarrow O(N)$
S.C $\rightarrow O(N)$

actual syntax

int lo = hm.get(arr[i]);

Q. Given an array of size N. Find the length of longest sequence of consecutive elements.

eg. $[100, 4, 3, 6, 10, 20, 11, 5, 101]$

$100 \rightarrow 101 \Rightarrow 2$

$3 \rightarrow 4 \rightarrow 5 \rightarrow 6 \Rightarrow 4$ (ans.)

$10 \rightarrow 11 \Rightarrow 2$

idea-1. Sorting - $[-1, 1, 2, 3, 4, 7, 8, 9]$

1
4
3

T.C $\rightarrow O(N \log N)$

pseudo-code \rightarrow (# to do)

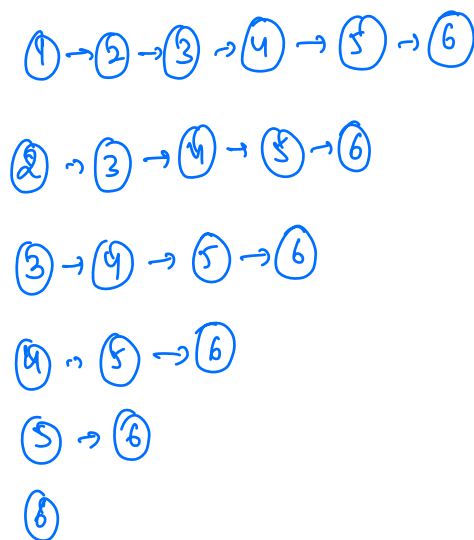

idea-2. let's try to treat every element as the starting point of the consecutive sequence.

arr = [-1, 8, 2, 3, 7, 1, 4, 9]

Analyse T.C.

[2, 5, 3, 1, 6, 4]

iteration.

6
+
5
+
4
+
3
+
2
+
1

⇒ $\frac{N(N+1)}{2}$ iterations

T.C. → $O(N^2)$

$x-1$ x

observation → If $x-1$ is present in the array, should we start our sequence from x ?

⇒ x can't be a starting point of sequence.

arr = [-1, 8, 2, 3, 7, 1, 4, 9]

length
1

(-1) → (0)

(8)

(2)

(3)

(7) → (8) → (9) → (10) 3

(1) → (2) → (3) → (4) → (5) 4

(4)

(9)

Hashset

-1, 8,

2, 3, 7

1, 4, 9

pseudo-code.

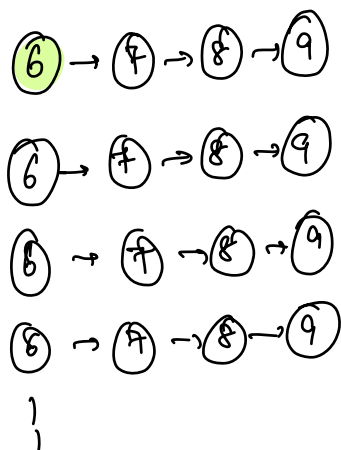

① Insert all the elements in hashtable, ans = 0

```
for (iterate on hashtable) { Google search
    x = arr[i] x → element from hashtable.
    if (x-1 is not present in hs) {
        chain = 1
        y = x+1
        while (y is present in hs) {
            chain++
            y++
        }
        ans = max(ans, chain);
    }
}
return ans
```

T.C → $O(N)$
S.C → $O(N)$

arr → [6 6 6 6 6 6 6 6 6 7 8 9 9 9]
 ↑ ↑

6, 7, 8, 9

Q) Given an array of integers. Find the length of longest subarray with sum = 0.

arr \rightarrow $\begin{bmatrix} 2 & 2 & 1 & -3 & 4 & 3 & 1 & -8 & 6 & -2 & -1 \end{bmatrix}$
pSum \rightarrow $\begin{bmatrix} 2 & 4 & 5 & 2 & 6 & 9 & 10 & 2 & 8 & 6 & 5 \end{bmatrix}$

* \rightarrow if elements are repeating in pSum[], then we have a subarray with sum = 0.

* \rightarrow to find the longest length \Rightarrow farthest duplicates in pSum[].

* edge case \Rightarrow pSum[i] == 0 \Rightarrow length of subarray = $i+1$
